'Bridge Function' Modal Process

Consider a crustacean, like a crab. Once it reaches a certain stage of growth, it cannot develop or grow physically any larger until it sloughs off and backs out of its shell and forms a new, larger shell that provides room for further growth. In an intellectual, emotional, and spiritual sense, the same is true of human beings.

In our case, our 'shell' can be referred to in many different ways: paradigms, belief systems, mental maps, but the point is this. Once you reach a certain point of development, you may not be able to grow past that point within your current 'frame of reference', within the old structure.

In other words, some notion or idea about the world ^{and your role in it} may need to be surrendered or abandoned to make room for your personal growth and development. Unless we are willing to make room for this growth and development by releasing the old 'frame of reference', the old shell, we stagnate. We revolve around the same references and we project the same recurring patterns. ^{arrested development}
→ principles & priorities

A folksy way of referring to this inclination, of resisting growth by a steadfast stubbornness of adhering to our current 'frame of reference', is by saying that someone is 'set in their ways'. I once read that:

"An ego is a point of view attempting to survive."

So, if you are inclined to uphold and defend your 'current frame of reference', your current system of beliefs, then this material may not be suited to your personal preferences or inclination. As I stated earlier, information that presents from an external source is easily defended against and therefore its influence is easily resisted.

If someone is willing to entertain new information and the value becomes apparent, then it 'sparks an interest'. If we become aware and discern the value, then we convert that external

cycle to complete, sometimes called 'coming full circle'. This 'dwell angle' is contingent on our inclination to be open to and 'identify with' the truth of enduring and endearing principles and practices verses being resistant or becoming defensive and 'distancing ourselves from' the truth and exemplifying:

"Ego is a point of view attempting to survive."

- The Essence Is Conserved

As we evolve, the growth that we experience can stir feelings of disloyalty to and abandonment of who we were. Others who have observed or experienced the change in our character and behaviors may accuse us of trying to be someone we are not, a false personage, an imposter. This can be unsettling.

The Essence of Being is Becoming

To explore this perception and share some insight into this process, I will expand the analogy of the crustacean where further growth and development requires the animal to slough off its current exoskeletal shell to form a new one that provides room or capacity for growth:

"The discarded shell has as its vocation, as it were, to be destroyed (discarded) in its primary form in order to conserve the realization of something else so near of kin that it may be properly regarded as its own true self in the resulting existence to which it gives rise, and into whose actuality its own essence enters and is there conserved." emergence

The true essence of our being is conserved in truth by whom and what we become. *"A predisposed disposition for yielding Initiative + Initiate → to a manifest source of latent potential."*

Cascade effect

A **cascade effect** is an inevitable and sometimes unforeseen chain of events due to an act affecting a system.^[1] If there is a possibility that the cascade effect will have a negative impact on the system, it is possible to analyze the effects with a consequence/impact analysis. Cascade effects are commonly visualised in tree structures, also called *event trees*. *event line versus time line*

In aeronautics

Cascade effects seen in the perspective of space travelling are theoretical possibilities that "space junk" or a satellite destroyed by a meteor will send debris throughout the orbits of most telecommunication satellites destroying them in the process and subsequently sending that debris into all possible orbits, destroying everything in orbit around the Earth, known as the Kessler syndrome. It is theorized that if this occurs, space flight beyond Earth will become very difficult if not impossible.

In medicine

In biology, according to Mold and Stein, the term cascade refers to "a process that, once started, proceeds stepwise to its full, seemingly inevitable, conclusion".^[2] The main cause of a cascade of injury in medicine is by misdiagnosis and medical error. These result in iatrogenic injury and from medical error flows a cascade of effects and results often including pain, disability, loss of job, poverty and homelessness which obviously cause mental health problems and may cause death. In medicine, a cascade effect may also refer to a chain of events initiated by an unnecessary test, an unexpected result, or patient or physician anxiety, which results in ill-advised tests or treatments that may cause harm to patients as the results are pursued. An example would be ordering a full body CT scan without a clear reason, finding an incidentaloma and undergoing a debilitating surgery to remove it, despite the fact that the condition was asymptomatic and possibly benign.^{[3][4]}

In ecology

There is also an ecological definition of cascade effects, in which the death of one key species in an ecosystem triggers the extinction of other species.
